# Aryan Qureshi

647-425-4779 | aryan.r.qureshi@gmail.com | linkedin.com/in/aryanqureshi | github.com/aryanqurxshi

## Education

**University of Ottawa** — Ottawa, ON

*Bachelor of Applied Science in Electrical Engineering & Management* — *Sept. 2025 – Jan. 2030*

- **Awards:** uOttawa Design Day Winner, Winter 2026 (first-year engineering cohort)
- **Coursework:** Circuits, Digital Systems, Signals & Systems, Engineering Design, Business Management, Accounting

## Experience

**VaultQ** — Ajax, ON

*Co-Founder & Engineer* — *April 2026 – Present*

- Co-founded VaultQ with a team of 2, building a resale inventory platform across three surfaces on one API: a SwiftUI iOS app, a Next.js dashboard, and an Express/TypeScript backend on Postgres. All pricing and fee arithmetic runs server-side so no client can produce a conflicting number.
- Engineered an algorithmic safe-buy pricing engine that normalizes live market data from external REST APIs (StockX, eBay, Shopify), backed by a 482-test Vitest suite with golden tests pinning pricing output across refactors.
- Enforced multi-tenant isolation with Postgres row-level security on 9 tables rather than application filters, and built a five-method marketplace adapter behind shared eligibility, listing, and delist logic so a new platform is an adapter rather than a rewrite.
- Running a closed beta with 5 active testers ahead of App Store launch, using their feedback to refine the pricing engine and app experience.

**The Logistics Alliance Inc.** — Mississauga, ON

*Data Intern – Supply Chain Management* — *May 2026 – Aug. 2026*

- Built an internal tool that catches incorrect file types at intake and tunes the flagging filter against recurring patterns in rejected paperwork, reducing documents held for missing information.
- Reconciled Bills of Lading and Inbound Control Forms against system records and traced pipeline exceptions to root cause before they reached inventory counts.

*Customer Success Intern* — *July 2025 – Sept. 2025*

- Supported enterprise accounts (Sobeys, Lindt, Kellogg's, Pepsi, Mondelez) on shipment schedules; maintained lead times in TC Software and ran Excel-based validation to improve reporting accuracy.

**Palace.to** — Ajax, ON

*Founder* — *March 2023 – Present*

- Scaled a resale brand to $80,000+ in revenue, running sourcing, inventory, pricing, and Instagram-led marketing end to end.

## Projects

**Beacon** | *Python, RAG, Vector Search* | AGI Ventures Healthcare Hackathon — July 2026

- Built an AI clinical copilot in 24 hours that drafts SOAP notes from recorded visits, suggests OHIP billing codes, and ranks the physician inbox by urgency.
- Grounded chart search in hybrid vector and full-text retrieval so responses cite the source note instead of generating unsupported claims.

**EmotiCare** | *Next.js, React, MongoDB Atlas, face-api.js* — Jan. 2026 – March 2026

- Built a webcam-based system that classifies student emotion in real time and surfaces per-student trends to instructors, flagging sustained negative patterns.
- Stored only facial recognition descriptors rather than images, allowing re-identification across sessions without retaining any photos.

## Technical Skills

**Languages**: Python, C, TypeScript, JavaScript, Swift, SQL, MATLAB
**Software**: SwiftUI, SwiftData, Express.js, Node.js, Next.js, React, Tailwind CSS, PostgreSQL
**Hardware**: Altera FPGA boards, LTspice, Arduino, oscilloscopes, bench instrumentation, soldering
**Tools**: Git, Xcode, Vitest, REST APIs (StockX, eBay, Shopify), Neon, Vercel, Excel
